Computer methods in applied mechanics and engineering

Contents

Preface – What is high order? xi

Plenary lectures

Sum-accelerated pseudospectral methods: finite differences and sech-weighted differences
J.P. Boyd 1

Stabilization of spectral methods by finite element bubble functions
C. Canuto 13

Resolution properties of the Fourier method for discontinuous waves
D. Gottlieb and C.-W. Shu 27

Effective spectral approximations of convection–diffusion equations
F. Pasquarelli and A. Quarteroni 39

Domain decomposition

Resolution of fourth-order problems by the mortar element method
Z. Belhachmi and C. Bernardi 53

A spectral element methodology tuned to parallel implementations
F. Ben Belgacem and Y. Maday 59

Spectral element methods for large scale parallel Navier–Stokes calculations
P.F. Fischer and E.M. Rønquist 69

Adaptive mesh strategies for the spectral element method
C. Mavriplis 77

Multidomain decomposition of curved geometries in the Chebyshev collocation method for thermal problems
C.R. Schneidesch and M.O. Deville 87

Hyperbolic equations

An essentially non-oscillatory reconstruction procedure on finite-element type meshes: application to compressible flows
R. Abgrall 95

On discontinuous solutions of hyperbolic equations
K.S. Eckhoff 103

Spectral element–FCT method for the one- and two-dimensional compressible Euler equations
J.G. Giannakouros, D. Sidilkover and G.E. Karniadakis 113

Filtering non-periodic functions
S.M. Ould Kaber 123

Spectral methods for 2D Riemann problems
S.M. Ould Kaber and C. Rosier 131

Space-time spectral element method for solution of second-order hyperbolic equations
U. Zrahia and P. Bar-Yoseph 135

p-Version

The p and h–p versions of some finite element methods for Stokes' problem
S. Jensen and S. Zhang 147

Superconvergence phenomena in the finite element method
M. Křížek 157

Analysis of the interface singularity of a two-fluid flow by h and h–p finite elements
F. Levieux, D. Berghezan and F. Dupret 165

An iterative solver for p-version finite elements in three dimensions
J. Mandel 175

Combining hierarchic high order and mixed-interpolated finite elements for Reissner–Mindlin plate problems
T. Scapolla and L.D. Croce 185

Preconditioners

Preconditioned Chebyshev collocation methods and triangular finite elements
M.O. Deville, E.H. Mund and V. Van Kemenade 193

A Chebyshev collocation algorithm for the solution of advection–diffusion equations
A. Pinelli, C. Benocci and M. Deville 201

Time schemes

A high order characteristics method for the incompressible Navier–Stokes equations
K. Boukir, Y. Maday and B. Métivet 211

Higher order alternate directions methods
M. Schatzman 219

A spectral Lagrange–Galerkin method for convection-dominated diffusion problems
A. Ware 227

Various high order methods

Polynomial extensions of compatible polynomial traces in three dimensions
F. Ben Belgacem 235

Extrapolation, combination, and sparse grid techniques for elliptic boundary value problems
H. Bungartz, M. Griebel and U. Rüde 243

A fast solver for elliptic boundary-value problems in the square
D. Funaro 253

High order numerical quadratures for layer potentials over curved domains in $\mathbb{R}^3$
J.-L. Guermond 257

High order finite differences methods on non-smooth domains
P. Olsson 265

Higher order uniformly convergent methods for singular perturbation problems
H.-G. Roos 273

On the eigenvalues of second-order pseudospectral differentiation operators
B.D. Welfert 281

Wavelets

A dynamically adaptive wavelet method for solving partial differential equations
S. Bertoluzza, Y. Maday and J.C. Ravel 293

Towards a method for solving partial differential equations by using wavelet packet bases
P. Joly, Y. Maday and V. Perrier 301

Wavelet algorithms for numerical resolution of partial differential equations
S. Lazaar, Pj. Ponenti, J. Liandrat and Ph. Tchamitchian 309
